EXPERIMENT NO:07

Experiment 7: Cellular System Performance Dashboard Using Figma

1. Aim

To develop a dashboard prototype in Figma displaying the performance criteria of a cellular communication system.

2. Requirements

- Figma
- Web browser
- Internet connection

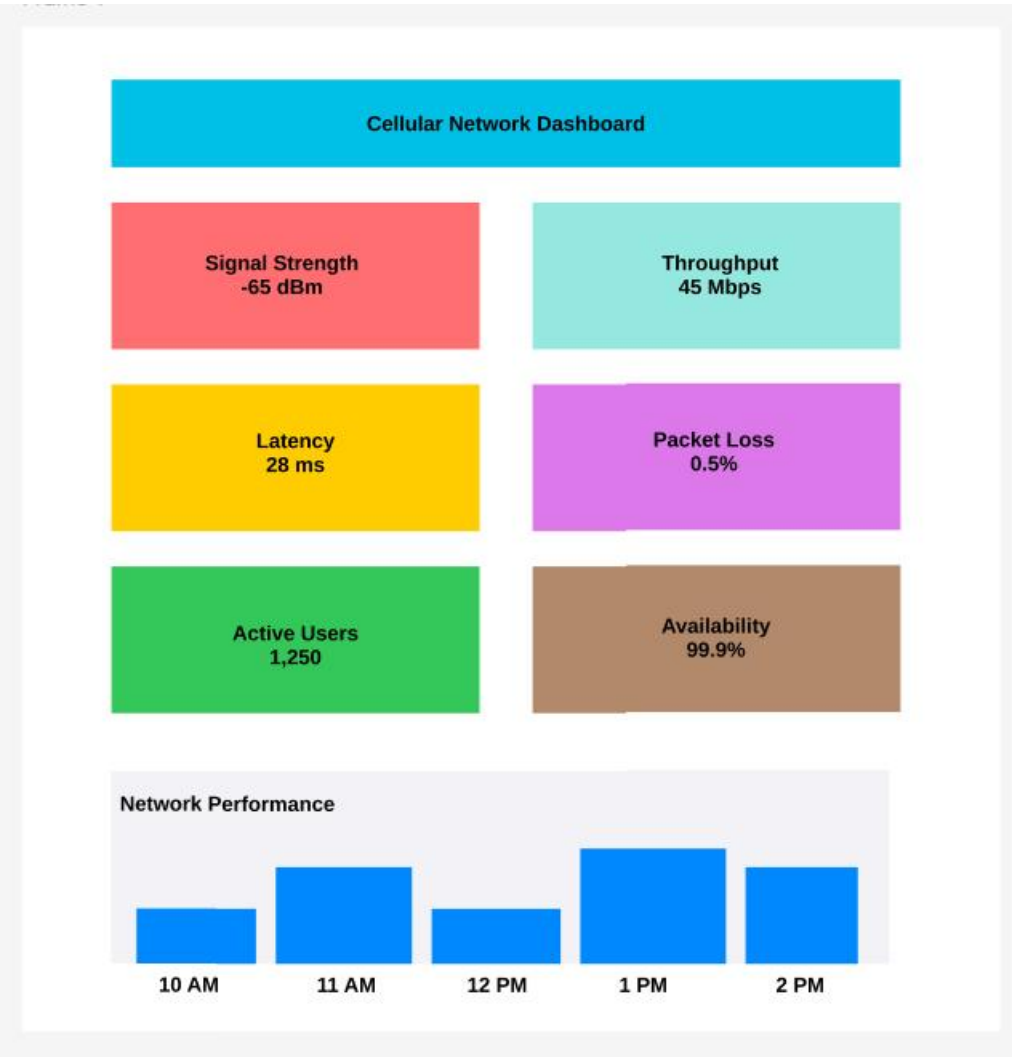

3. Procedure

1. Open Figma and create a new design file.
2. Create a desktop frame using the Frame tool (F).
3. Add the heading Cellular Network Performance Dashboard.
4. Create dashboard cards to display:
    - Signal Strength
    - Network Throughput
    - Latency
    - Packet Loss
    - Active Users
    - Network Availability
5. Use rectangles with rounded corners to create the metric cards.
6. Add line charts or bar charts to show throughput and latency trends.
7. Use colours to indicate network status: green for good, yellow for moderate and red for poor.
8. Add labels, icons and a time-period selector.

9. Use the Prototype tab to connect interactive controls to other frames.
10. Click Present to view the dashboard prototype.

4. Output

A cellular network performance dashboard displaying signal strength, throughput, latency, packet loss, active users, network availability and a throughput trend chart.

5. Result

Thus, a dashboard prototype displaying cellular system performance criteria was designed using Figma.
