EXPERIMENT NO:05

Experiment 5: Mobile Application Wireframe with Localization Using Figma

1. Aim

To design a wireframe for a mobile application that incorporates localization features using Figma.

2. Requirements

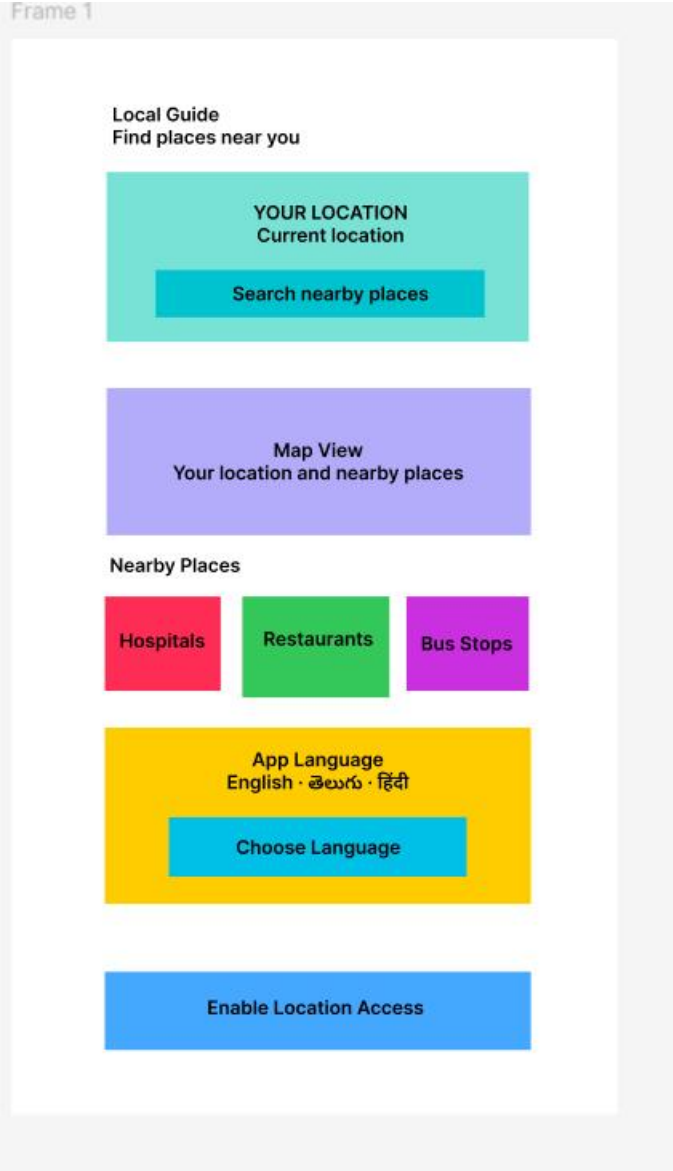

- Figma
- Web browser
- Internet connection

3. Procedure

1. Open Figma and create a new design file.
2. Select the Frame tool (F) and choose a mobile phone frame.
3. Add the application title Local Guide App.
4. Create a location section displaying the user's current location.
5. Add a search bar to search for nearby places.
6. Add a language selection option, such as English, తెలుగు and हिंदी.
7. Add a map placeholder and nearby places section.
8. Include location-based categories such as hospitals, restaurants and bus stops.
9. Add a location permission button.
10. Use the Prototype tab to connect the language selection and location screens.
11. Click Present to view the prototype.

4. Output

A mobile application wireframe showing location access, a map, nearby places, search functionality and language selection.

5. Result

Thus, a mobile application wireframe incorporating localization features was designed using Figma.
