EXPERIMENT NO:15

Experiment 14: GPRS Operation Flowchart Using Figma

1. Aim

To develop a flowchart in Figma explaining the operation of General Packet Radio Service (GPRS).

2. Requirements

- Figma
- Web browser
- Internet connection

3. Procedure

1. Open Figma and create a new design file.
2. Press F and select a desktop frame.
3. Add the heading GPRS Operation Flowchart.
4. Use an oval for Start and End, rectangles for processing steps, and a diamond for decisions.
5. Add the following steps in order:
    - Start
    - Switch on the mobile device.
    - Connect to the GPRS network.
    - Authenticate the subscriber.
    - Establish a packet data connection.
    - Send and receive data.
    - End
6. Connect all shapes using arrows.
7. Use different colours for processing and decision steps.

8. Click Present to view the flowchart.

4. Simple Figma Diagram

Start

Switch on mobile device

Connect to GPRS network

Authenticate subscriber

Establish packet data connection

Send and receive data through SGSN and GGSN

End

Reference flowchart — recreate these shapes and arrows in Figma.

5. Output

A flowchart showing how a mobile device connects to the GPRS network, authenticates the subscriber, establishes packet data connectivity and exchanges data through the GPRS network.

6. Result

Thus, a flowchart explaining the operation of General Packet Radio Service (GPRS) was designed using Figma.

Next: Experiment 15 — Design a wireframe for a mobile application addressing challenges in ad hoc wireless networks using Figma.

Experiment 15: Ad Hoc Wireless Network Mobile App Wireframe Using Figma

1. Aim

To design a wireframe for a mobile application that addresses challenges related to ad hoc wireless networks using Figma.

2. Requirements

- Figma
- Web browser

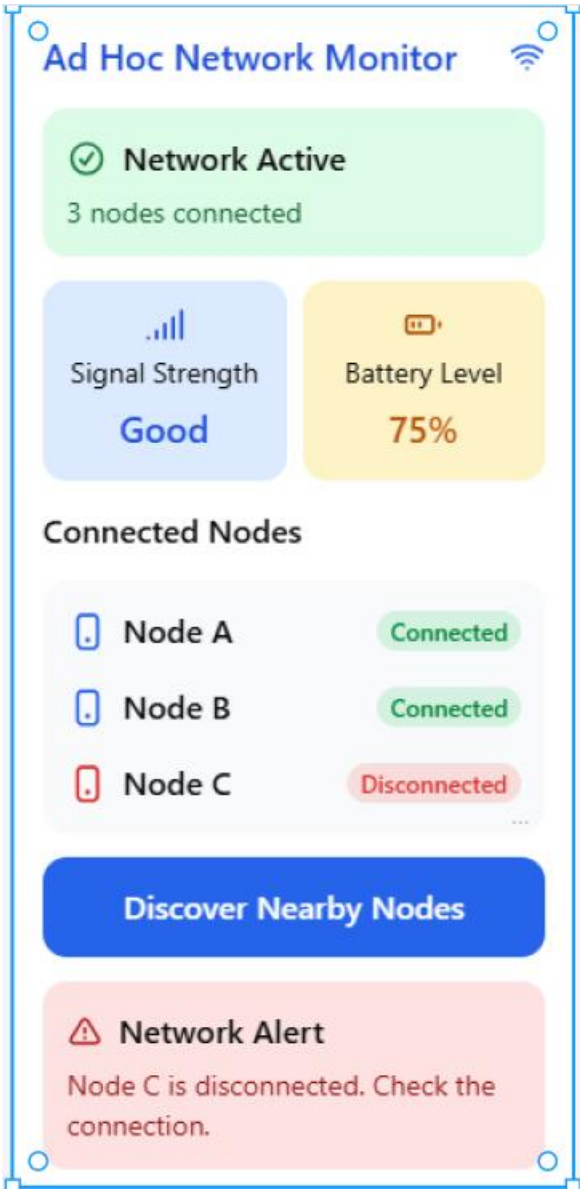

- Internet connection

3. Procedure

1. Open Figma and create a new design file.
2. Press F and select a mobile phone frame.
3. Add the heading Ad Hoc Network Monitor.
4. Create sections for network status, connected nodes, signal strength and battery level.
5. Add a button to discover nearby nodes.
6. Add a network map showing connections between devices.
7. Include alerts for weak signals and disconnected nodes.
8. Use different colours to show connected and disconnected devices.
9. Use the Prototype tab to connect screens.
10. Click Present to view the wireframe.

4. Output

A mobile application wireframe displaying network status, connected nodes, signal strength, battery level and disconnection alerts.

5. Result

Thus, a wireframe for an ad hoc wireless network monitoring application was designed using Figma.
